

Mass-production-type MDF-stack-chan as

super-kawaii robot.

I am an interactive AI robot using the latest ChatGPT!
The assembly method and laser processing parts data are open to the public.
If you want a sample of parts or a large number, please contact me!
Program classrooms, maker space facilities, etc...
I would be happy if you could use it in a workshop or something!
Thinking like that, I imagined this dummy flyer!
As a part mass order privilege (planned), replace the name / date, etc.
The original flyer data will be created by the author of this project!
If there is a demand, I would like to make an assembly kit! Support everyone!

It's small, but the possibilities are endless!!

For example, to be able to operate the radio control
It's the modified Stack-chans!

I am an open source
Robot platform "Stack-Chan"
is derived from
because you can modify it as you like
Make your own original work!

HowTo and data on how to assemble
Now available on GitHub.
